Do Real **Do More**

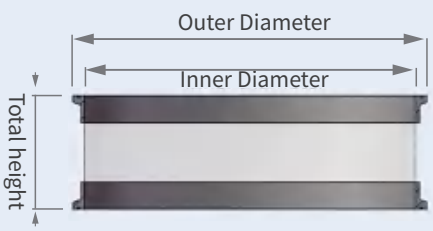

PRODUCTINTRODUCTION

Flexible connection adopts flexible polymer material as barrel, and adopts TC clamp card connection at both ends, which is convenient for customers to install and use. It mainly uses closed transfer of dry pharmaceutical, chemical intermediates, high toxic and high active materials, etc. The good performance of fast installation, safe and efficient could solve a lot of problems faced by customers in the use of traditional soft connections. Such as serious leakage, inconvenient installation, short service life, material non-compliance, not resistant to material corrosion, altecting the accuracy ot weighing and measurement, size non-standard, inventory and procurement costs.

ADVANTAGES

- TC clamp, easy to install, airtight transfer, excellent air tightness
- Materialshows soft and transparent, easy for visual operation
- Strong material, long service life
- Produced in clean workshop, antistatic/non-antistatic optional, meet the requirements of direct contact with food and drugs.
- Polyethylen(main material) is resistant to chemical corrosion and has stable chemical properties
